

Adrift (2022) argues that the United States is flailing, despite all its success and global dominance since World War II. It's a country struggling to adapt to revolutionary changes in technology, facing deep economic and political divisions and threats of extremism, and quickly losing ground to rivals like China. Despite all of this, Scott Galloway still sees reason for hope, but first lays out what he sees as the biggest challenges facing the nation.

Galloway uses charts and statistics to back up his observations but makes it all very relatable to the average reader.
